

## Final Project

---

*Project designed by you*

The final project of Code in Place is meant to be a celebration of what you have learned and a chance to explore one of the joys of coding. For the final project you can also design a program to do whatever you like.

Encourage aesthetic programs, interesting algorithms and code that solves a neat problem. You can choose something that you think is cool. We are providing a couple standard projects in case you have trouble choosing one.

### **Deadlines**

Submit your work by **Monday May 25<sup>th</sup>** 11:59pm Anywhere on Earth to get your work seen by course staff.

Submit your work by **Friday May 29<sup>th</sup>** 11:59pm Anywhere on Earth to have your work hosted publicly (opt-in of course).

We are going to host a website where folks from outside the course can get a sense of what you have done, and your final project will be a capstone!

### **Submission**

Your final deliverable is a 2 minute video with a title and a short description of what you have done. If you have trouble making / uploading a video, you could submit an image.
